BRIDGESTONE

SOME OF TODAY'S MAJOR TRANSPORT CHALLENGES

Bridgestone is constantly working to cut the total cost of ownership of your long haul fleet operations, whilst helping to reduce CO2 emissions and promote ecological conservation. Day after day, we are committed to pushing boundaries, pioneering new technologies and investigating new compound materials, so that we're constantly improving our premium tyres.

Accounting for 30%, fuel is the biggest operating cost for a long

WET GRIP

Poor grip and safety major concern for fleets and drivers using low rolling resistance tyres.2

for up to one quarter of total road transport

Vehicle manufacturers have to calculate and declare CO, emissions for each truck they produce, using the VECTO tool - As per regulation (EU) 2017/2400.

1: ACEA Fosition Paper: Future CO₂ standards for heavy duty vehicles, April 2016

2: Based on findings from internal market research by Bridgestone Europe with long haul operators across Europe, 2016-2018

3: European Environment Agency [2017] "National emissions reported to the UNFCCC and to the EU Greenhouse Cas Monitoring Mechanism"

NEW GROUNDBREAKING ECOPIA

ECOPIA H002, a new generation of uncompromising tyres for long haul fleets, which save fuel, reduce CO₂ emissions and keep you going even in challenging weather conditions.

BEST IN CLASS FUEL EFFICIENCY

A-A-A COMBINATION FOR STEER, DRIVE, TRAILER 1

BEST IN CLASS WET TRACTION

OUTPERFORMING ALL ITS COMPETITORS 2

TOP RATING FOR WET GRIP

B-B-B COMBINATION FOR STEER, DRIVE, TRAILER 1

WINTER READY

3PSFM AND M+S FOR STEER, DRIVE, TRAILER

ECOPIA H002 achieved the TÜV SÜD Tyre Performance Mark in recognition of product safety and quality. This achievement applies to each individual tyre: steer, drive and trailer.

Compared with Goodyear Fuelmax D, Continental Ecopius HD3, Michelin X-Line Energy D2, Reell TH301 in 315/70422.5 size. Test carried out by TDV S00 at the request of Endgestone in June and July 2018. Report number:713136052-7

ALREADY PROVEN IN THE MARKET

Already proven with over 11 fleets, 137 vehicles and over 14,687,640 kilometres'

TBR
1.1 | 100 km
lower fuel consumption compared with previous generation. 2

ECOPIA H002 tested for 18 months in long haul operations between Poland and Western/ Eastern Europe.

"We have to say that we are really satisfied with the new ECOPIA tyres. They actually generated significant fuel savings at the same time as delivering a long life. Continuity during winter conditions was also important. We will now fit our remaining long hauf trucks with ECOPIA HOO2."

Dawid Sachs, Technical Manager SACHS TRANS

ECOPIA H002 tested for 18 months in long haul operations between Portugal and the rest of Europe.

"We were most impressed with the excellent reduction in fuel consumption without compromising any of the other key performance areas. The ECOPIA H002 tyres gave great adherence and traction in diverse atmospheric conditions, great durability and mileage."

José Santos, Technical Director PATINTER SA

€ 234,000/vr

savings on fuel cost for an average long haul fleet. 3

546 tonnes/yr reduced CO₂ emissions for a better carbon footprint. 3

1: Based on internal field evaluation. Status April 2018

2: Based on calculations with the VECTO tool for a 4x2 tractor and trailer combination with ECCPIA HOD2 315/70F23.5 steer and drive, and 385/55822.5 trailer lyves compared with the same unit fitted and under same conditions with previous generation ECCPIA HOD1 tyres. Please note that actual savings may vary as they depend heavily on other factors.

 Financial swings and CD₂ reduction projected for an entire Seet based on the following assumptions: fleet size of 150 tractors and 150 trailers, 130,000 km annual mileage per truck, dietal price 41.2§.

AHEAD OF THE COMPETITION

TÜV SÜD test results: ECOPIA H002 outperforms its competitors for wet traction'

SUPPORTING TECHNOLOGIES

SMART PATTERN CONCEPT

"INNOVATIVE PATTERN
DESIGN IMPROVES
ROLLING RESISTANCE
AND WET GRIP"

1

LOW PATTERN DEFORMATION

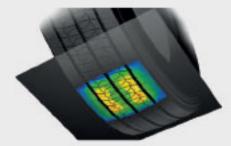

stiffness minimises

deformation and energy losses.

Optimised compression

Higher effective contact area with optimised water drainage for better wet grip.

HIGH EFFECTIVE CONTACT AREA

2

HI-TECH COMPOUNDS

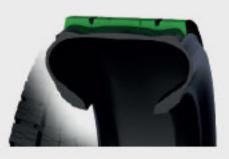

"LATEST COMPOUND
AND MIXING
TECHNOLOGIES FOR
STRIKING THE RIGHT
BALANCE BETWEEN
ROLLING RESISTANCE,
WET GRIP AND WEAR"

1

REDUCED ENERGY LOSSES

NanoPro-Tech™
cap compound
with nano-selective
reactions and new
base and bead filler
materials to reduce
rolling resistance.

EXTRA WET GRIP

High Silica cap compound and new mixing technologies for the ECOPIA H-DRIVE 002 to boost wet grip over entire tyre life.

- High number of full-depth sipes
 improves grip and gives safe operation all year long.
- 2 Stone ejectors in centre grooves increase casing resistance.

- 3 Slim bead and slim buttress reduce tyre weight and rolling resistance.
- Wider shoulder lugs enhance traction and improve water drainage from the centre.
- Optimum void distribution improves water drainage and reduces braking distance in wet conditions.
- 6 Wide tread width and optimised tread depth improve compression stiffness and cornering power for lower rolling resistance and better mileage.

PRODUCT LINE-UP

Product line-up at November 2018. Visit your local Bridgestone website for latest line-up information.

Optimise your tyre management and fleet operations

Extend your tyres' life with Bandag retreads

Bandag FUELTECH H-DRIVE 002, FUELTECH H-TRAILER 002 retreads extend the life of your valuable tyre casings and also improve fuel efficiency.¹

Maximise fuel savings and reduce fleet costs with the Bridgestone tyre monitoring system

The annual average savings for a typical tractor-trailer combination running at the correct tyre pressure are up to € 500 in fuel consumption, € 200 in tyre costs and € 400 in breakdown costs. The cost of installing a Bridgestone tyre monitoring system is paid back within one year!

Up to €1,100/yr saving per tractortrailer combination running at correct tyre pressures. ²

tiremotics
